Product Description

Radio Frequency Anti Drone System On Vehicle Mounted Automatic Device

1, Product Introduction

The vehicle-mounted integrated drone detection and countermeasure system is designed for drone detection, identification, and counteraction. The system integrates multiple technologies such as radio detection, protocol decoding, and spectrum scanning. By utilizing the characteristic signals received from drones, it enables detection and identification of unauthorized drones. Through radio interference and jamming technology, the system provides low-altitude security protection for surrounding convoys within a 3km radius, even at high speeds of up to 150 km/h.
