Product Description

Solution for Detection Surveillance and Target Indication of Civilian Drones with Anti UAV Radar

1, Product overview

The 5000S is mainly composed of one radar array, one mechanical turntable, and one power adapter. It is used for the detection, surveillance, and target indication of micro/small civilian drones in key areas such as borders, airports, and military bases. It can accurately provide target trajectory information such as azimuth, distance, altitude, and speed.

2, Functional highlight

1) Omni directional detection:

360 ° omnidirectional detection, real-time tracking of targets, while outputting three coordinate information of targets

2) Strong adaptability to the environment:

Possessing the ability to work 24/7 and adapt to harsh environments such as night, rain, snow, haze, and dust

3) High flexibility:

Long range detection of targets, easy installation

4) DBF technology:

DBF technology can improve anti-interference ability by transmitting multi beam technology

5) High cost-effectiveness:

By continuously improving the product, while ensuring detection effectiveness, we achieve a perfect combination of product reliability, usability, and economy
