

Hidden Camera detection 8-in-1 Full-Frequency Smart Anti-Surveillance Device With Infrared Thermal Imaging

Our Product Introduction

Basic Information

- Place of Origin: China
- Brand Name: MYT
- Certification: CNAS、CMA、CAL、ILAC-MRA
- Model Number: DT-03
- Minimum Order Quantity: 1
- Price: Pricing is negotiable based on order quantity
- Delivery Time: 10 work days
- Payment Terms: L/C,T/T
- Supply Ability: 1000units per month

Product Specification

- Detection Range: Up To 10 Meters Depending On Device Type And Environmental Conditions
- Frequency Range: 10MHz - 8GHz
- Power Source: Rechargeable Lithium-ion Battery (built-in)
- Battery Life: Up To 8 Hours Of Continuous Use
- Display: 2.8-inch Color TFT LCD
- Dimensions: Compact, Portable Design (exact Dimensions Available Upon Request)
- Weight: Lightweight Construction For Extended Use Comfort
- Storage Temperature: -20°C To 60°C
- Highlight: **Handheld drone detector with thermal imaging , Smart anti-surveillance device full-frequency , Infrared thermal imaging camera detector**

Product Description

DT-03 Hidden Camera Detection Device

1, Product Overview

The DT-03 Hidden Camera Detection Device is a state-of-the-art multi-functional surveillance detection system designed to protect personal privacy in an increasingly connected world. This professional-grade device integrates advanced detection technologies to identify various types of hidden surveillance equipment, providing users with comprehensive protection against unauthorized monitoring.

Equipped with a high-resolution display and intuitive interface, the DT-03 offers 8 major detection functions in one compact, portable device. Whether you're traveling and staying in hotels, renting apartments, or working in sensitive environments, this powerful tool ensures your privacy is protected by detecting hidden cameras, wireless eavesdropping devices, and other surveillance equipment.

The device features a sleek, modern design with a comfortable grip, making it easy to use for extended periods. Its advanced detection capabilities cover a wide frequency range from 10MHz to 8GHz, ensuring no hidden device goes undetected. With the DT-03, you can have peace of mind knowing your personal space remains private and secure.

2, Specification

Detection Range	Up to 10 meters depending on device type and environmental conditions
Frequency Range	10MHz - 8GHz
Power Source	Rechargeable lithium-ion battery (built-in)
Battery Life	Up to 8 hours of continuous use
Display	2.8-inch color TFT LCD
Dimensions	Compact, portable design (exact dimensions available upon request)
Weight	Lightweight construction for extended use comfort
Storage Temperature	-20°C to 60°C

3, Features

The DT-03 Hidden Camera Detection Device combines multiple advanced detection technologies to provide protection against various surveillance threats. At its core is the Hawk Eye Detection System, which utilizes advanced optical technology to precisely detect and locate hidden pinhole cameras concealed behind one-way mirrors in hotel rooms, changing areas, and other private spaces. This system provides real-time visualization of detected camera positions on the built-in display, ensuring users can quickly identify potential privacy violations.

Complementing the optical detection is a sophisticated Multi-Frequency Wireless Detection system that scans from 10MHz to 8GHz, covering all common wireless surveillance frequencies. This technology rapidly identifies wireless eavesdropping and covert surveillance devices through visual and audio alerts with adjustable sensitivity levels, and can be set to continuous scan mode for ongoing protection. The device also includes specialized WiFi and Bluetooth Detection capabilities that identify nearby network devices and Bluetooth-enabled equipment, using RSSI-based positioning for precise localization while differentiating between normal consumer devices and potential surveillance equipment.

For comprehensive communication signal monitoring, the DT-03 features Mobile Phone Signal Detection that tracks 2G, 3G, 4G, and 5G cellular networks to identify unauthorized mobile devices used for audio or video recording. This system provides detailed signal strength metrics and network type classification for accurate positioning of potential threats. Additionally, the Infrared Thermal Imaging Detection capability identifies electronic devices by their thermal emissions, with specialized modes to detect infrared cameras used for night surveillance and highlight areas with abnormal heat patterns that may indicate hidden devices.

The device goes beyond standard detection with specialized Endoscope Camera Detection designed to identify tiny probe cameras used for invasive surveillance in small, hard-to-reach areas. This feature uses high-sensitivity sensors capable of detecting even the smallest camera devices and provides directional detection to pinpoint exact locations. All detection activities are supported by a Comprehensive Reporting System that records detailed logs with timestamps and signal information, generates comprehensive reports for security audits, and allows data export in multiple formats for further analysis.

Designed with user experience in mind, the DT-03 features a High-Resolution Color Display with intuitive touchscreen operation for quick function access. Multiple alert mechanisms including audio and visual indicators ensure detection awareness, while customizable settings allow users to adjust sensitivity levels and detection parameters according to specific needs. The compact, lightweight construction ensures easy portability for use on-the-go, making it an essential tool for protecting privacy in any environment.

4, Application Scenarios

5, Certification Certificate

6, Company profile

Chongqing Miao Yitang Technology Co., Ltd. is a specialized company engaged in anti-drone and unmanned intelligent defense management. With the technical support from the AI Internet of Things Research Institute of the Chinese Academy of Sciences and collaborations with multiple intelligent AI companies, the company has established research laboratories for AI unmanned field products, accumulating a variety of technical patents.

The company's products are widely applied to unmanned automatic management solutions for various defense and perimeter areas, including AI anti-drone systems and AI unmanned vehicle patrol systems. These systems integrate with multiple technologies such as optoelectronics, radar, vibration, thermal imaging, facial recognition, and radio frequency management, truly achieving a 24-hour uninterrupted anti-drone defense and ground perimeter defense warning system. This allows for cost savings for clients, reduction in human resource allocation, and

ensures the safety of clients' lives and property. The outstanding security system has won the company an excellent reputation and created higher value for its partners.

7, Customer Service

- 1). We offer 24 hours service after sales
- 2). If there are any usage or quality issues with the product, we provide online technical support to diagnose the cause of the problem.
- 3). Should you find the products unsatisfactory, kindly return it to us within a period of 3 months from the date of dispatch. Upon receipt and inspection, should the products be found to be free from any damage attributable to human factors, a full refund will be granted. Alternatively, we can engage in discussions to amend the product and subsequently reship the product to you.

CUSTOMER SERVICE

- * Fast and patient communication: professional sales reply immediately
- * Fast delivery: usually 2-7 days
- * Flexible Safe shipping: fast by air or sea with cheap freight
- * Customer-friendly: complete user manual and exact video training provided
- * After sales service: one year warranty and life time technical support
