

Mobile Phone Monitoring Identify And Control Illegal Mobile Phones By Base Station Technology

Our Product Introduction

Basic Information

- Place of Origin: China
- Brand Name: MYT
- Certification: CNAS、CMA、CAL、ILAC-MRA
- Model Number: DT-06
- Minimum Order Quantity: 1
- Price: Pricing is negotiable based on order quantity
- Delivery Time: 10 work days
- Payment Terms: L/C,T/T
- Supply Ability: 1000units per month

Product Specification

- Supported Bands: 2G, 3G, 4G, 5G, WiFi, Bluetooth
- Operating Principle: Identify And Control Illegal Mobile Phones
- Device Detection: Apple Phones, Foreign SIM Cards, IoT Cards
- Location Tracking: Real-time Location Tracking Of Detected Devices
- Device Options: Over A Dozen Models Available
- Interface: Ethernet, WiFi, 4G/5G Options
- Highlight: **mobile phone monitoring base station, illegal mobile phone detector, handheld drone detector technology**

Product Description

DT-06 Mobile Phone Monitoring

1, Product Overview

Mobile Phone Monitoring is an advanced security system designed to identify and control illegal mobile phones using base station technology. This sophisticated solution provides comprehensive monitoring capabilities for various communication devices, ensuring enhanced security and control in sensitive areas. The system utilizes cutting-edge technology to detect, track, and manage mobile phone activities, making it an essential tool for law enforcement, security agencies, and organizations requiring strict communication control. With its ability to cover multiple frequency bands including 2G, 3G, 4G, 5G, WiFi, and Bluetooth, the Mobile Phone Monitoring system offers unparalleled versatility and effectiveness in detecting unauthorized communication devices. Whether used in correctional facilities, government buildings, military installations, or other high-security environments, this system provides reliable and efficient mobile phone detection and control capabilities.

2, Specification

Parameter	Specification
Product Name	Mobile Phone Monitoring System
Technology Type	Base Station Technology
Operating Principle	Identify and control illegal mobile phones
Supported Bands	2G, 3G, 4G, 5G, WiFi, Bluetooth
Frequency Range	Comprehensive coverage of all major communication bands
IMSI Detection	Real-time IMSI detection and identification
Device Detection	Apple phones, foreign SIM cards, IoT cards
Signal Detection	Unauthorized mobile phone signals
Location Tracking	Real-time location tracking of detected devices
Movement Monitoring	Continuous monitoring of device movements
Communication Jamming	Selective communication jamming capabilities
Signal Blocking	Targeted signal blocking for specific devices
Cloud Integration	Cloud-based retrieval of APP data
Data Storage	Secure storage of monitoring data

Reporting	Comprehensive reporting and analysis tools
Device Options	Over a dozen models available
Scalability	Scalable architecture for various deployment sizes
Form Factor	Compact, rugged design
Installation	Flexible installation options
Environmental Rating	Suitable for indoor and outdoor deployment
Power Supply	AC 220V / DC 12V options
Power Consumption	Energy-efficient operation
Interface	Ethernet, WiFi, 4G/5G options
Remote Management	Support for remote configuration and monitoring

3, Features

The Mobile Phone Monitoring system incorporates advanced base station technology to provide comprehensive detection and control capabilities for unauthorized mobile devices. This sophisticated solution is designed to identify and manage illegal mobile phone activities in high-security environments, ensuring enhanced security and communication control.

With its high configuration design, the system covers all major communication frequency bands including 2G, 3G, 4G, 5G, WiFi, and Bluetooth. This extensive frequency coverage ensures that no illegal communication goes undetected, providing complete monitoring of all potential communication channels.

The system's IMSI detection feature enables real-time identification of mobile devices, allowing security personnel to quickly locate and track unauthorized phones. Its precise location tracking functionality provides accurate positioning information, facilitating effective monitoring and response to security threats.

Communication jamming capabilities allow for selective blocking of unauthorized signals, preventing security breaches and maintaining control over sensitive areas. This targeted approach ensures that only illegal communications are disrupted while legitimate signals remain unaffected.

Cloud-based data retrieval enhances the system's functionality by providing access to APP data and communication records. This feature offers valuable insights for security analysis, enabling comprehensive investigation and intelligence gathering.

The system's fully functional design includes the ability to identify Apple phones, foreign SIM cards, and IoT cards. This comprehensive detection capability ensures coverage of all potential communication threats, regardless of device type or origin.

With over a dozen different devices available, the Mobile Phone Monitoring system offers a wide range of options to suit various application scenarios, functional requirements, and budget considerations. This versatility makes it adaptable to different security needs and operational constraints.

The system is an ideal solution for law enforcement agencies, correctional facilities, government buildings, military installations, and other high-security environments where effective mobile phone control is essential. Its rugged construction and flexible installation options ensure reliable performance in both indoor and outdoor settings, providing continuous security monitoring regardless of environmental conditions.

4, Application Scenarios

5, Certification Certificate

6, Company profile

Chongqing Miao Yitang Technology Co., Ltd. is a specialized company engaged in anti-drone and unmanned intelligent defense management. With the technical support from the AI Internet of Things Research Institute of the Chinese Academy of Sciences and collaborations with multiple intelligent AI companies, the company has established research laboratories for AI unmanned field products, accumulating a variety of technical patents.

The company's products are widely applied to unmanned automatic management solutions for various defense and perimeter areas, including AI anti-drone systems and AI unmanned vehicle patrol systems. These systems integrate with multiple technologies such as optoelectronics, radar, vibration, thermal imaging, facial recognition, and radio frequency management, truly achieving a 24-hour uninterrupted anti-drone defense and ground perimeter defense warning system. This allows for cost savings for clients, reduction in human resource allocation, and

ensures the safety of clients' lives and property. The outstanding security system has won the company an excellent reputation and created higher value for its partners.

7, Customer Service

- 1). We offer 24 hours service after sales
- 2). If there are any usage or quality issues with the product, we provide online technical support to diagnose the cause of the problem.
- 3). Should you find the products unsatisfactory, kindly return it to us within a period of 3 months from the date of dispatch. Upon receipt and inspection, should the products be found to be free from any damage attributable to human factors, a full refund will be granted. Alternatively, we can engage in discussions to amend the product and subsequently reship the product to you.

CUSTOMER SERVICE

- * Fast and patient communication: professional sales reply immediately
- * Fast delivery: usually 2-7 days
- * Flexible Safe shipping: fast by air or sea with cheap freight
- * Customer-friendly: complete user manual and exact video training provided
- * After sales service: one year warranty and life time technical support
